No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                              , Search time 23 Seconds

US-08-202-178-2
US-08-202-178-2
Sequence 2, Application US/08202178
Patent No. 5569745
GENERAL INFORMATION:
APPLICAMY: Goodbody, Anne
APPLICAMY: Pollak, Alfred
TITLE OF INVENTION: PEPTIDE-CHELATOR CONJUGATES
NUMBER OF SEQUENCES:
ADDRESSE: Sulte 500, 3000 K Street, N.W.
CITY: Washington, D.C.
COUNTRY: USA
ZIF: 20007-5109
COMPUTER: EMPARABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: Plemp Compatible
OPERATION SYSTEM: PC-0005/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURSIFICATION NUMBER: US/08/22,178
FILING DATE: 25-FEB-1994
CLILING DATE: 25-FEB-1994
TILING DATE: 25-FEB-1994
TILING DATE: 25-FEB-1994
TILING DATE: 25-FEB-1994
TELEPHANE: (202) 672-5300
TELEPHANE: (202) 672-5300
TELEFRAX: (202) 672-5399
OPERATING SYSTEM: PC-DOS/MS-DOS
SOCTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/171,737
FILING DATE: 22-DEC-1993
CLASSIFICATION: S14
ATTORNEY/AGENT INFORMATION:
NAME: Bent, Stephen A
REGISTRATION NUMBER: 29,768
REGISTRATION NUMBER: 29,768
REFERENCE/DOCKET NUMBER: 16777/253/ALLE
TELECOMMUNICATION INFORMATION:
TELECOMMUNICATION INFORMATION:
TELEFAK: (202) 672-5399
TELEFAK: 904136
INFORMATION FOR SEQ ID NO: 2:
SEQUENCE CHARACTERISTICS:
LENGTH: 5 amino acids
TYPE: amino acid
TYPE: amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TELEX: 904136

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-08-713-484-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Patent No. 6334996

Patent No. 6334996

GRERAL INCRAGATION:
APPLICANT: WONG, Ernest
TITLE OF INVENTION: CHELATORS THAT PREDOMINATELY FORM A SINGLE
TITLE OF INVENTION: CHERE
TITLE REPRESENCE: 8298-7019
CURRENT FILLE NEPRINGE: 1829-7019
CURRENT FILLE NO. 1008-12
CURRENT FILLE DO SEOUND NUMBER: US/08/997,802
CURRENT FILLE DO SEOUND NUMBER: US/08/997,802
SUFFMER PERFECT FILLE DO SEOUND NUMBER: US/08/997,802
SOFTWARE: PATENTIN DATE: 1997-12-24
NUMBER OF SEO ID NOS: 12
SOFTWARE: PATENTIN VEV. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                 LOCATION: (3) OTHER INFORMATION: L-cysteine with an acetoamidomethyl protecting OTHER INFORMATION: group attached via the Sulfur atom.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FEATURE:

```
peptide can be coupled to a metal radionuclide chelator (structural peptide can be coupled to a metal radionuclide chelator (structural peptide can be coupled to a metal radionuclide chelator (structural command agiven in the specification), labelled with a diagnostically useful metal isotope, to form a peptide derived radionuclide chelator. When the chelator is coupled to a targeting molecule and labelled with a diagnostically useful metal, it can be used to detect pathological conditions by diagnostic imaging. For example, AMMINDS2 targets the conditions by diagnostic imaging. For example, AMMINDS2 targets the conditions by diagnostic imaging. For example, AMMINDS2 targets the conditions by diagnostic likes useful for the rapid imaging of sites of local inflammation. Radionuclides used include 99mTC, 45Cu, 97Ru, 105Rh, 109Pd, 186Re, 198Au, 199Au, 203Pb, 212Pb and 212Bi. The coupling of a targeting agent and radionuclides are typically bound at the more numerous low- affinity sites, forming unstable complexes. The new conjugates give better science, forming unstable complexes. The new conjugates give better science, 99mTC-19G4, 1111 mw agents and show superior biodistribution
                                                                                                                                                                                                      New peptide derived radionuclide chelators and metal complexes - useful for diagnostic imaging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Target, delivery, radionuclide chelator; diagnosis; therapy, detection; atherosclerosis; thrombosis; Alzheimer's disease.

The invention relates to a composition for use in targeting endothelial cells, tumour cells, or other cells which express NP-1. The activity of compositions of the invention may be described as cytostatic. Compounds of the invention are useful in pharmaceutical compositions for inhibiting angiogenesis, for imaging and targeting an angiogenic site, endothelial cells, tumour cells or other cells that express NP-1 in a human or animal. They may also be used as ultrasound contrast agents, for staging a tumour in a human or animal, for screening for the ability of an agent to target endothelial cells, tumour cells or other cells that express NP-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note= "residue optionally modified by one of the following; Thr(Ob21), DPPE-Glutarcyl-Di(aminodioxaoctanoyl), aminodioxaoctanoyl-Thr(OB1), di(aminodioxaoctanoyl).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes polypeptide compounds of formula (1), capable of direct transformation into a radiopharmaceutical: Ch-Ln-(X1-X2-X3-X4-X5)d (1), where X1-X5 = amino a radiopharmaceutical: Ch-Ln-(X1-X2 metal bonding unit; and d is selected from 1, 2 and 3. The radiopharmaceuticals are useful for the diagnosis of infection, inflammation and cancer. The radiopharmaceuticals bind in vivo to the tuftsin receptor on the surface of white cells which accumulate at the site of infection and inflammation and can then be detected using radiation detecting probes or by imaging a planar or ring gamma camera. The radiopharmaceuticals can also be used in treating cancer. The
                                                                                                                                                             AAW31110-W31147 are peptides used for targeting a new hydrazino-type compound to various sites of disease, e.g. atherosclearcit plaque, sites of infection, platelets, thrombus or amyloid plaque. The new compound is a radionuclide chelator and is used to radiolabel the targeting peptides for the detection and diagnostic imaging of sites of disease, e.g. amyloid plaques in Alzheimer's disease. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptides and radiopharmacueticals used for imaging infection, inflammation and cancer.
